

## Palace Hotel Technology

The Palace Hotel has taken a “Web 2.0” style approach by seeking out the voice our clients: “What technology would you like to see in our hotel?” The Palace has responded by upgrading our infrastructure, based on the answers to that question...

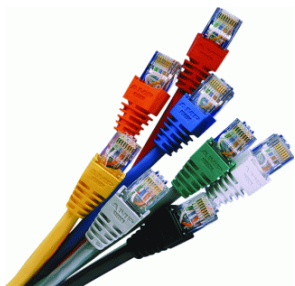

### Lightning-Fast, Reliable Bandwidth

The Palace Hotel is connected via a DS-3 line to the internet, having 45MB of Tier-1 bandwidth at all times.

The Palace can offer our clients as much bandwidth as you may require for your events, as we have access to limitless bandwidth.

### High-Volume, High-Capacity Wireless Connectivity

The Palace Hotel offers Xirrus Wireless Arrays, which are high-capacity, long-range wireless devices that can accommodate thousands of users at the same time. The Palace is the only hotel in San Francisco that exclusively offers the Xirrus solution in each meeting room.

### New wiring in all meeting rooms

Category 6 is the latest cable/wiring standard for Gigabit Ethernet. The Palace has a minimum of 2 Ethernet jacks in each of our meeting rooms.

### North American Support

The Palace Hotel offers high-quality support in multiple languages for all of our High Speed Internet Access connections in our Guest and Meeting Rooms. Superclick is based in North America.
